

Lesson 5 Import and Export Action File

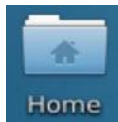

This lesson will teach you how to export the action group file edited on PC software and import it to other devices of the same type for execution, so as to realize the export and import of action files between different devices.

1. Preparation

Please refer to the content in “6. Raspberry Pi and Expansion Board Lesson/Raspberry Pi Basic Lesson/Lesson 3 Remote Desktop Connection” to connect ArmPi Pro remotely via No Machine.

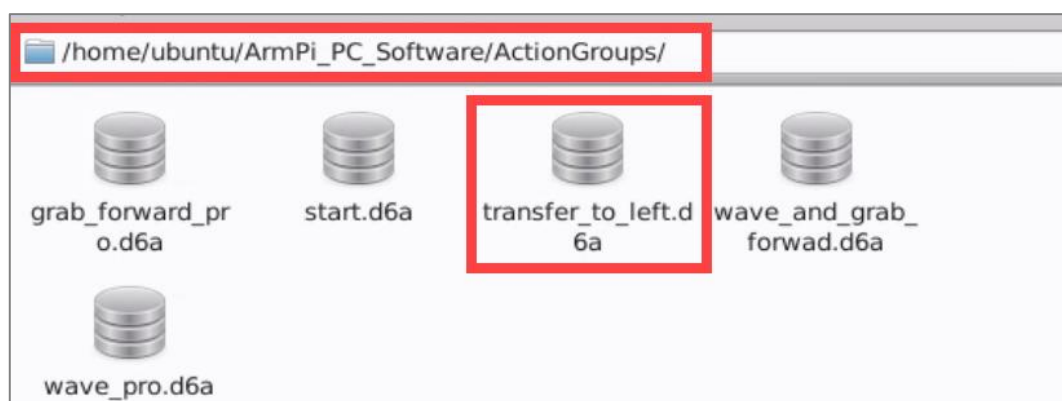

2. Export Action

Take exporting and importing “transfer_to_left” action file as example.

1) Click

2) As the figure shown below, find “transfer_to_left” file according to the following path.

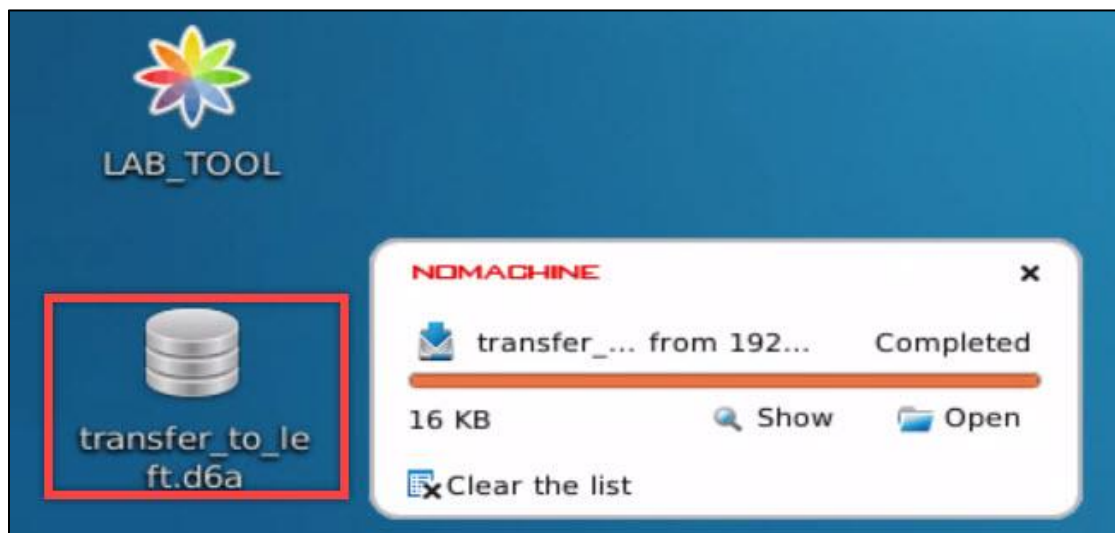

3) Drag the action file to system desktop to export action file.

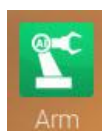

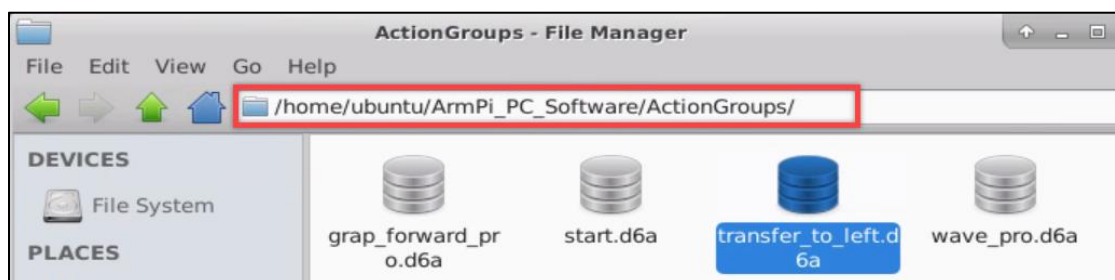

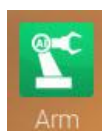

3. Import File

1) Drag the action group file “transfer_to_left” to system desktop.

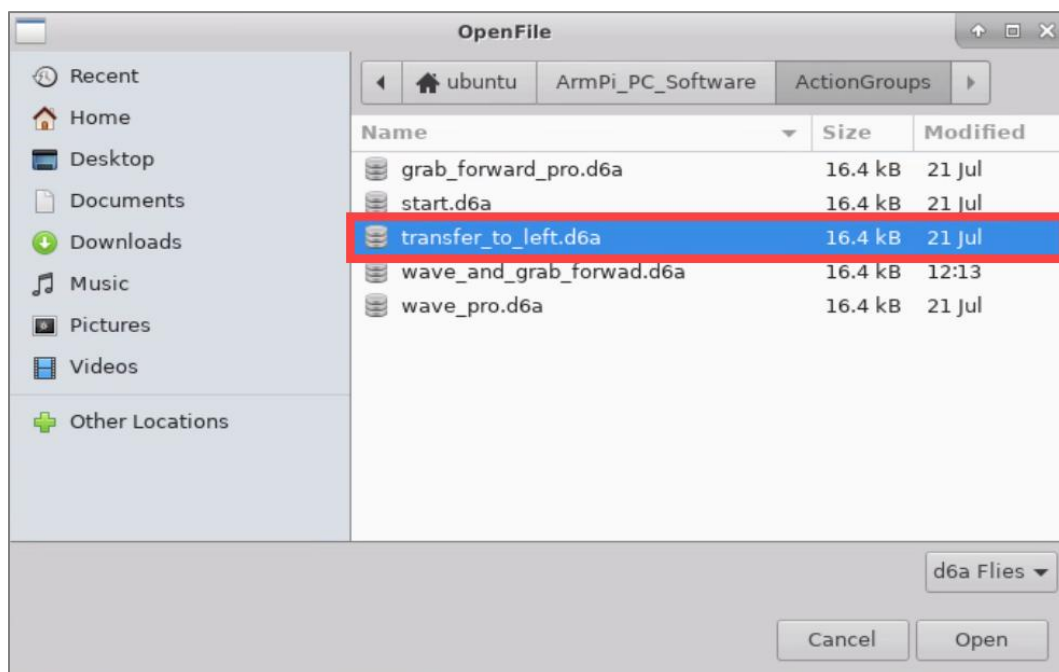

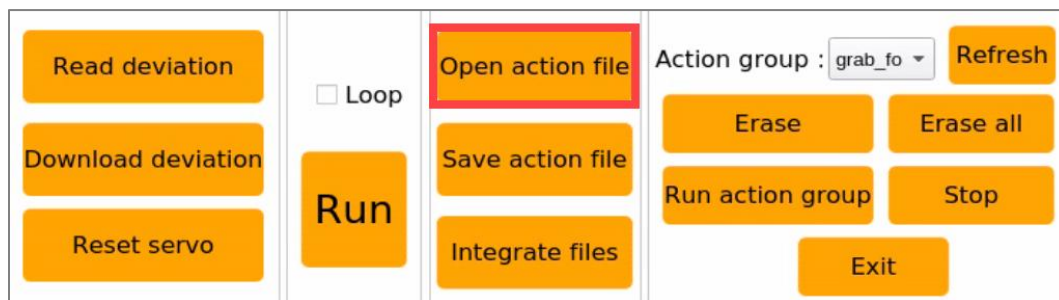

2) Then drag or copy the file “transfer_to_left” to the following path.

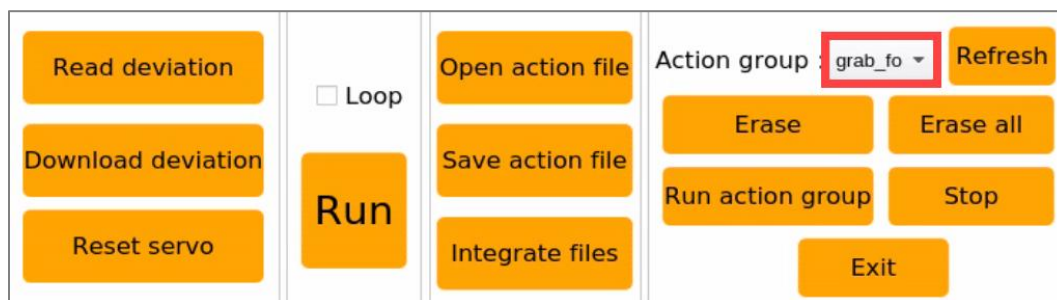

3) Now, double-click  to enter PC software (Normal mode).

4) Click “Open action file” and find the imported action file according to the following path.

5) Or click the drop down of action group to select the imported action file.

6) Click "Run" to perform the action group.
